

Jackrabbit's Duplicate Family Detection

Jackrabbit will try to avoid creating a duplicate Family record, whether a user adds a family at the front desk with the Quick Registration form or a family registers from your website with the [Online Registration Form](#).

Quick Registration

The Quick Registration form for in-house registrations offers a *Duplicate Search* link that will alert you to any possible duplicates based on the *Family Name* entered.

The screenshot shows the 'Registration' form with a 'Duplicate Search' link next to the 'Family Name' field. A yellow dashed arrow points from the 'Duplicate Search' link to a pop-up window titled 'Possible Duplicates Search'. The pop-up window displays a table with one record found.

Loc	Family/Acct Name	Status	Students	Address1	HomePhone	Balance
HELP	Claxton	Active	Lisa, Dana	123 McGregor Street	704-555-3434	150.00

If the search displays an existing record for the family, the user should exit the Quick Registration form and go to that family's record to update it and/or enroll students in classes.

If the record is not a duplicate and the remainder of the registration is completed, Jackrabbit will perform the family duplicate detection check when the form is submitted. This will look at, in this order: *Last Name*, *Zip Code*, and the *first 8 characters of the Home Address/Address 1*.

A match on these criteria will pop up the Family Duplicate Detection window, which displays the match and asks the question, "Is this the same family?"

- If Yes is clicked, the information in the Quick Registration form will be added to the existing record.
- If No is clicked, a new Family record will be created.

Online Registration

A family's email address is required when registering online. If the email entered for *Contact #1* matches an email address already in your system, Jackrabbit will display a pop-up message directing the family to log into their Portal by clicking **OK**. They will not be able to continue with the Registration Form using the existing email address.

If no match is found on the email given, the form can be completed and submitted at which time Jackrabbit will perform the family duplicate detection check. This will look at, in this order: *Last Name*, *Zip Code*, and the *first 8 characters of the Home Address/Address 1*.

If a match is found based on these 3 criteria, Jackrabbit will update that Family record with any new

information included on the Registration Form (such as the addition of a contact). If no match is found a new Family record is created. This may be the result of a misspelling or other minor discrepancy, such as the '#' in front of a unit/apartment number, which can result in a duplicate Family record.

By directing your existing families (families that already have a record in your system) to enroll their students in classes through their Parent Portal, you can greatly reduce the occurrence of duplicate records. See [Parent Portal](#) for more information.
